

CURIO MusicAPI

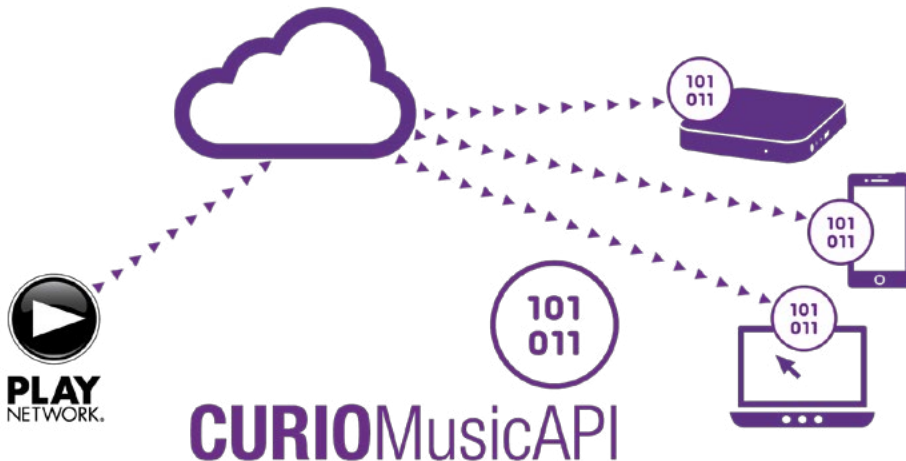

CURIO is PlayNetwork's content delivery platform that enables branded music and messaging to be distributed in-store, on-device, and on the web.

With a flexible, open platform, CURIO helps brands, manufacturers, and resellers reduce capital investment for content delivery, integrate with IT systems and services to control distribution, and extend brand experiences beyond the store.

CURIO MusicAPI integrates PlayNetwork content and information with client-side applications

Features:

- Integrations are easy due to clear documentation and straight-forward API resources
- Reliable delivery through cloud-based, highly-available and fault-tolerant API end points
- JSON over REST
- Content delivered via streaming or store and forward through the cloud
- Curated playback schedules, content meta-data and URLs for directly downloading assets
- Rapid and scheduled updates pushed via the cloud
